Environmentally Friendly Collection for Businesses

Responsible businesses are looking for alternatives to traditional disposal to help make their companies environmentally friendly. Our commercial waste collection system is designed to help small businesses recycle and dispose of wastes while controlling costs.

The waste stream generated by businesses is collected and processed at the CVT Material Recovery Facility located in Anaheim. Incoming recyclables are dropped on a floor called a tipping floor. Depending on the type of material, it is pushed on to a conveyor. Conveyors take the material up and through processing stations, where recyclables are sorted and dropped into bins below the sorting line.

Preparing recyclables for efficient shipment involves crushing, shredding and baling the product.

This collection and processing system is good for the environment and makes it possible for business owners and managers to feel responsible about how their waste is handled.

Want to do more?

Our recycling services are managed through **CVT Recycling** which assist companies in the development of effective programs tailored to each company's goals of reducing waste and maximizing recycling.

Companies that generate large quantities of recyclable materials may benefit from a waste analysis to determine if source separation is right for them. A waste analysis identifies the sources, amounts and types of trash generated; the current methods and cost of disposal, and the volume of potentially generated recyclable trash.

Customized Collection and Recycling Services For The Construction Industry

Disposal services are designed to maximize the recovery of recyclables from your construction project. Looking to get LEED certified? We work with you and your team from the beginning of the job to ensure that your project meets the requirements and has the proper documentation for the LEED 2.1 and 2.2 credits. We maintain a large inventory of refuse and storage containers. Prompt delivery and pickup are available on a scheduled, or on an as needed, basis.

Commercial Fueling

We are known for our waste and recycling services but did you know we also provide integrated fueling solutions for your business?

CONVENIENCE

Centrally located in Anaheim, near the junction of the 91 and 57 freeways, our commercial fueling station offers easy access for large fleets including trucks with trailers. As one of our customers you will have access to over 30,000 CFN fueling locations throughout the United States and Canada.

COMPREHENSIVE REPORTING

Automated accounting of your fuel purchases by vehicle showing miles per gallon, cost per mile and total miles driven make it easy to track your fuel cost.

CARD LOCK FUELING

Automated card lock fueling with a host of customized restrictions including daily fuel consumption, fuel type, time of day and day of week help you manage your fleet.

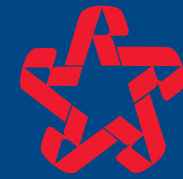

CUSTOMER SERVICE

Customer satisfaction is the hallmark of our fueling business, and service is our number one priority.
